

Gasoline Engine Water Pump with Protective Frame

This gasoline engine water pump is designed for efficient water transfer in various applications. It features a robust frame for protection and portability.

Overview

Reliable Water Transfer Solution

This gasoline engine water pump is engineered for efficient water transfer across diverse applications, including agricultural irrigation, construction sites, and emergency water removal. Powered by a robust four-stroke gasoline engine, it delivers consistent performance in demanding environments. The unit features a durable protective frame that ensures both equipment longevity and easy portability for field use.

Technical Specifications

| | |
|-----------------|-----------------------------|
| Engine Type | Four-stroke gasoline engine |
| Starting System | Recoil starter |

Design & Build

| | |
|---------------------|---|
| Frame Construction | Protective steel frame |
| Key Design Features | Portable, Durable Housing, Protective Frame |

Operational Details

Primary Applications

- Agricultural irrigation
- Construction site dewatering
- Emergency water removal

Connection Ports

Inlet Port • Outlet Port
