

Gasoline Engine Water Pump with Strainer

These water pumps have durable construction and protective frames. They are powered by gasoline engines and include a strainer to prevent debris from entering the pump.

Product Overview

High-Performance Gasoline Engine Water Pump

This gasoline-powered water pump is engineered for reliable performance in demanding environments such as construction sites and agricultural settings. Featuring a robust protective frame, it ensures durability during transportation and operation. The integrated strainer system effectively prevents debris from entering the pump, which maintains optimal flow efficiency and reduces the need for routine maintenance.

Technical Specifications

Available Port Sizes

- 1 inch
- 1.5 inches
- 2 inches
- 3 inches
- 4 inches

Pump Variants

Clean Water Pump, Dirty Water Pump

Power Source

Gasoline Engine

Application Suitability

Primary Applications

Construction Sites • Agricultural Irrigation • Emergency Water Removal
