

Gasoline Powered Earth Auger

This construction machinery features a powerful engine mounted above a heavy-duty auger drill. The unit is equipped with a handlebar for operator control and a throttle trigger for speed adjustment.

Product Overview

Professional Earth Drilling Solution

The Gasoline Powered Earth Auger (Model EA490B) is a robust construction tool designed for efficient ground penetration. Featuring a high-performance two-stroke engine and heavy-duty helical flighting, this unit is engineered to handle various soil conditions with ease. It offers operators precise control through an ergonomic handlebar and intuitive throttle trigger, making it an essential asset for construction, landscaping, and agricultural projects.

Technical Specifications

Model Number	EA490B
Engine Type	Two-stroke
Key Features	Gasoline Powered, Helical Flighting, Ergonomic Handlebar, Throttle Control

Applications

Primary Applications

- Construction drilling
- Landscaping projects
- Agricultural soil preparation
