

Gasoline Powered Garden Tiller Cultivator

This robust garden cultivator is designed for efficient soil tilling and preparation. Featuring a powerful engine, it provides ample torque for breaking up compacted soil and creating a fine tilth for planting.

Overview

High-Performance Soil Cultivation

This robust garden cultivator is engineered for efficient soil tilling and preparation tasks. Equipped with a powerful gasoline engine, it delivers the torque necessary to break through compacted ground and create a fine tilth suitable for planting. Its durable construction and adjustable design make it a versatile tool for seedbed preparation, soil aeration, and nutrient incorporation.

Technical Specifications

Power Source	Gasoline Engine
Tine Material	Hardened Steel

Features

Key Features

- Adjustable handles for ergonomic control
- Compact design for high maneuverability
- High-torque engine for compacted soil
- Hardened steel tines for durability

Applications

Primary Applications	Seedbed Preparation, Soil Aeration, Compost Incorporation, Fertilizer Mixing
