

Gasoline Powered High Pressure Water Pump

This gasoline powered pump provides high pressure and flow rates for efficient water transfer. Its robust engine and durable pump construction make it suitable for irrigation, construction, and emergency water supply.

Product Overview

High-Performance Gasoline Water Pump

This gasoline-powered high-pressure water pump is engineered for smooth operation, low vibration, and exceptional fuel efficiency. Featuring a heavy-duty frame and an advanced combustion chamber, it provides consistent, reliable power for demanding tasks. Built with high-quality materials, including a ceramic mechanical seal, this pump is designed for durability and longevity in various environmental conditions.

Technical Specifications

Pump Body Material Options

- Aluminum alloy (strong and light)
- Cast-iron (high lift)

Key Features

Easy Start, Low Vibration, Fuel Efficient, Ceramic Mechanical Seal, Anti-Vibration Frame

Applications

Suitable Applications

- Crop irrigation (plains, hills, mountains)
- Orchards
- Construction sites
- Mine water pumping
- Municipal drainage
