

# Gasoline Powered High Pressure Water Pump

This gasoline-powered high-pressure pump is designed for efficient water transfer and irrigation. It delivers high-volume water flow at significant pressure thanks to its robust engine and durable pump construction.

## Product Overview

### High-Performance Water Transfer

This gasoline-powered high-pressure pump is engineered for efficient water transfer and demanding irrigation tasks. Built with a robust engine and durable pump construction, it reliably delivers high-volume water flow at significant pressure. The unit is encased in a protective steel frame, ensuring both portability and long-term durability in challenging environments like agriculture, construction sites, and emergency water management.

## Technical Specifications

Power Source	Gasoline
Suitable Applications	Agriculture, Construction, Emergency Water Management

## Design & Build

### Key Features

- High-volume water flow
- High-pressure output
- Durable pump construction
- Protective steel frame for portability

Frame Construction	Protective Steel Frame
