

# Gasoline Powered Water Pump

This self-priming centrifugal pump is powered by a gasoline engine. It is designed for high-volume water transfer applications, such as irrigation and dewatering.

## Product Overview

### Professional Performance Overview

This self-priming centrifugal pump is engineered for high-volume water transfer and reliable operation in diverse environments. Powered by a robust gasoline engine, it offers excellent portability for remote locations and demanding irrigation or dewatering tasks. With its durable cast iron impeller and volute construction, this pump ensures long-lasting performance and consistent water flow efficiency for various professional water management needs.

## Technical Specifications

|                      |                                      |
|----------------------|--------------------------------------|
| Pump Type            | Self-priming centrifugal             |
| Engine Type          | Gasoline                             |
| Material Composition | Cast Iron Impeller, Cast Iron Volute |

## Applications

### Typical Applications

- Agricultural irrigation
- Dewatering
- General water transfer
- Remote site operations

## Key Features

### Key Highlights

High Flow Rate • Portable • Durable Construction • Easy Operation
