

Gasoline Powered Water Pump

This portable pump is powered by a gasoline engine. It is designed for applications such as irrigation, construction, and dewatering.

Overview

Versatile Portable Pumping Solution

This gasoline-powered water pump is engineered for reliable fluid transfer in environments where electrical power is unavailable. Featuring a robust centrifugal pump mechanism and a durable protective frame, it is designed for demanding applications including agricultural irrigation, construction site dewatering, and general water management. Its portable design ensures easy deployment across various job sites.

Technical Specifications

Power Source	Gasoline Engine
Pump Type	Centrifugal

Key Features

Design Highlights

Portable • Durable Metal Frame • Off-grid Compatible

Suitable Applications	Irrigation, Construction, Dewatering
