

Gasoline Powered Water Pump

This robust water pump is designed for efficient water transfer and irrigation. Featuring a powerful gasoline engine, it delivers high flow rates and reliable performance in demanding environments.

Overview

Professional Water Management Solution

The QD100-28 is a robust, gasoline-powered water pump engineered for high-efficiency water transfer and irrigation tasks. Built for demanding environments, this unit features a durable construction that ensures long-term reliability and wear resistance. It serves as an essential tool for agricultural irrigation, construction site dewatering, and emergency flood management.

Model Series

Technical Specifications

Product Features

- High flow rate capacity
- Durable wear-resistant construction
- Rugged gasoline-powered engine
- Suitable for demanding work environments

Power Source

Gasoline Engine

Primary Applications

Agriculture, Construction, Irrigation, Emergency Water Management
