

Gasoline Powered Water Pump

This gasoline-powered water pump is designed for irrigation, dewatering, and general water transfer. It features a robust 7.0 HP engine, providing ample power for efficient pumping.

Overview

High-Performance Gasoline Water Pump

This gasoline-powered water pump is engineered for efficient water transfer, irrigation, and dewatering tasks. Featuring a robust 7.0 HP engine and a durable aluminum alloy pump body, it provides reliable performance in demanding environments. The unit includes essential safety features like low oil protection and a high-quality ceramic mechanical seal to ensure longevity and consistent operation.

Technical Specifications

Max Flow Rate

60 m³/h

Max Flow

Engine Power	7 HP
Maximum Head	30 m
Inlet/Outlet Size	4 inch
Rated Speed	3600 min ⁻¹

Construction & Design

Design Features

- OHV Easy-start engine
- Self-priming capability
- Protective solid frame
- Low oil protection device

Key Materials

Aluminum Alloy Body, Cast Iron Volute, Cast Iron Impeller, Ceramic Mechanical Seal
