Product Overview

High-Performance Water Transfer

This gasoline-powered water pump is designed for efficient water transfer in demanding applications such as irrigation and construction site dewatering. Featuring a robust engine and durable metallic housing, it provides reliable performance even where electricity is limited. The unit is built for portability and ease of use, making it an ideal solution for versatile water management needs.

Technical Specifications

Inlet/Outlet Diameter	2 inch
Engine Model	CBS210F
Pump Model	CBSHP20

Features

Key Features

- Recoil starter for easy ignition
- Protective frame for durability and portability
- Corrosion-resistant metallic housing
- Integrated air filter system
- Easy-access drain plug for maintenance

Applications

Suitable For	Irrigation, Dewatering, Construction Sites, Water Management
