

Gasoline Powered Water Transfer Pump

This gasoline powered water pump is designed for efficient water transfer. It features a robust engine for reliable performance and includes a durable frame for protection and portability.

Product Overview

Reliable Gasoline Water Transfer

This gasoline-powered water pump is engineered for efficient and high-performance fluid transfer in demanding environments. Built with a robust engine and a protective, portable frame, it is perfectly suited for irrigation needs, construction site dewatering, and general-purpose water management. Its durable design ensures consistent operation even under challenging conditions.

Technical Specifications

Model Identifier	TY30CX
Power Source	Gasoline

Operational Safety

Safety Instructions	Do Not Run Dry
---------------------	----------------

Applications

Primary Applications

- Agricultural Irrigation
- Construction Dewatering
- General Water Transfer
