

Gasoline Water Pump

This gasoline water pump is designed for irrigation, construction, and emergency water removal. Powered by a gasoline engine, it provides reliable performance and is easy to use.

Product Overview

Professional Performance Overview

This gasoline-powered water pump is engineered for demanding tasks, including irrigation, construction site water management, and emergency drainage. It features a robust protective frame designed to ensure engine longevity and reliable operation in challenging environments. Built for efficiency, the unit delivers high flow rates and consistent pressure for both clean and slightly dirty water applications.
