

Gasoline Water Pump for Irrigation and Drainage

This gasoline water pump is a portable and efficient solution for water transfer needs. Powered by a gasoline engine, this pump offers reliable performance for irrigation, drainage, and general water pumping applications.

Overview

Reliable Water Transfer Solution

The Gasoline Water Pump SUZ25-30A is a portable and efficient solution designed for diverse water transfer needs. Powered by a dependable gasoline engine, it offers consistent performance for irrigation, drainage, and general pumping applications. Its robust construction ensures long-term durability, while the lightweight design facilitates easy transportation between job sites. This pump is an ideal choice for agricultural, construction, and emergency water management tasks.

Performance Metrics

Key Features

- High flow rate capability
- Effective suction lift
- Portable, lightweight design
- Robust construction for durability

Primary Applications

Irrigation, Drainage, Agricultural, Construction, Emergency Use

Power Source

Gasoline Engine
