

Gasoline Welder Generator

This is a gasoline-powered welder and generator. It combines the functionality of a welding machine and a power generator into a single unit.

Overview

Dual-Function Power Solution

The AGWY7500CXE is a versatile gasoline-powered unit that seamlessly integrates welding capabilities with electrical power generation. This robust machine is specifically engineered for professional use in construction sites, industrial workshops, and remote field locations. By combining two critical tools into one, it offers unmatched convenience and efficiency for demanding environments where mobility and dual-utility are required.

Technical Specifications

Fuel Source

Gasoline

Model ID

AGWY7500CXE

Key Features

Typical Applications

- Construction Sites
- Industrial Workshops
- Remote Field Operations

Capabilities

Welding Machine, Power Generator
