

Gasoline Welding Generator

This gasoline welding generator combines welding and power generation capabilities. It features AC output and adjustable current control for welding, all built into a robust frame with wheels for portability.

Product Overview

Versatile Power and Welding Solution

This gasoline-powered welding and generating set is engineered for dual-purpose utility, seamlessly combining robust welding capabilities with reliable AC power generation. Designed for mobility and durability, the unit features a sturdy frame with integrated wheels, making it ideal for on-site construction, maintenance, and emergency power requirements. Users can easily toggle between power generation and welding operations, with precise current control for high-quality weld results.

Technical Specifications

Maximum Welding Current

250 A

Max Current

Available Models

- HWS 145
- HWS 185
- HWS 205

AC Output Voltage

220-240V

Features

Control Panel Components

Component	Function
Voltmeter	Real-time voltage monitoring
AC Breaker	Electrical safety and protection
Welding Terminal	Cable connection point
Current Adjustment	Welding output control

Key Features

Portable Design, Integrated Wheels, Adjustable Current Control, AC Breaker Protection, Voltage Monitoring, Dual Functionality
