

Gear Hob for Pre-Shaving Operations

This precision-engineered gear hob is designed for pre-shaving operations. It features multiple cutting edges arranged in a helical pattern for efficient material removal and high surface finish.

Product Overview

Precision Gear Hob for Pre-Shaving

This precision-engineered gear hob is specifically designed for high-performance pre-shaving operations. Constructed for durability and accuracy, it features an optimized helical cutting edge geometry that ensures efficient material removal and superior surface finish. It is an essential tool for achieving precise gear tooth profiles in critical industrial, automotive, and aerospace applications.

Technical Specifications

Accuracy Grade

AA • A

Module Range

m0.5 – m12

International Standards

DIN 3968, ANSI B94.7, JIS B4354, GB/T 6084

Design and Profile

Profile Options

- Topping
- Protuberance
- Semi-topping
- Full-radius
