

Gear Pump

This gear pump is a positive displacement pump designed for industrial use. It is suitable for applications requiring precise fluid transfer, such as hydraulic and lubrication systems.

Product Overview

ZCB-90 Industrial Gear Pump

The ZCB-90 Gear Pump is a high-performance positive displacement pump engineered for demanding industrial fluid transfer requirements. With a focus on durability and consistent flow, this unit is designed to provide reliable service in hydraulic and lubrication systems. Its robust architecture ensures a long operational lifespan and straightforward maintenance, helping to optimize your facility's efficiency and reduce downtime.

Technical Specifications

| | |
|-----------------------|--|
| Pump Type | Positive Displacement Gear Pump |
| Suitable Applications | Hydraulic Systems, Lubrication Systems, Fluid Transfer |

Performance Features

Key Operational Benefits

- Consistent flow rate via precision gear mechanism
- High durability for demanding environments
- Engineered for ease of maintenance
- Minimized operational downtime
