

# Geared Head Drilling and Tapping Machine

This machine tool is designed for drilling and tapping operations on metal workpieces. It features a robust construction with a geared head for efficient power transmission and variable speed control.

## Overview

### Versatile Drilling and Tapping Solution

This geared head machine is engineered for high-performance drilling, enlarging, reaming, and tapping operations. Featuring a belt-drive system for quiet operation, it offers a 12-speed variable range suitable for processing a wide variety of hard and soft materials. Its stable, robust construction and adjustable head and table positioning ensure precision and flexibility for diverse industrial machining requirements.

## Technical Specifications

Supported Operations	Drilling, Enlarging, Reaming, Tapping
Speed Settings	12 speeds
Table Working Area	540 x 470 mm

## Features

### Drive Mechanism

Belt Drive • Low Noise

### Customization Options

- Multi-spindle drilling
- Multi-hole tapping

### Adjustability Features

- Vertical table adjustment
- Vertical head adjustment
- Reverse head movement
