

General Hardware Accessories

These hardware accessories are essential for various construction and DIY projects. They provide the necessary components for assembly and functionality.

Product Overview

Professional Construction Hardware

These general hardware accessories are designed for large-scale construction environments, supporting both steel and concrete structural frameworks. Engineered for durability and versatility, they are essential components for complex building projects involving cranes and heavy-duty scaffolding. This hardware ensures reliable connectivity and structural integrity across various stages of site development.

Application

Compatible Structures

- Steel frameworks
- Concrete structures
- Scaffolding systems

Primary Industry

Construction, Infrastructure, Structural Engineering
