

General Illumination LED Tube

This high-efficiency LED tube is designed for general illumination purposes. It features durable construction with a polycarbonate housing and aluminum heat sink.

Overview

High-Efficiency General Illumination

This LED tube is engineered for reliable general illumination, offering a durable construction with a polycarbonate housing and aluminum heat sink for optimal thermal management. It provides instant-on performance and flicker-free operation, making it an excellent choice for diverse commercial lighting applications. Designed to be compatible with standard fluorescent fixtures, this tube simplifies retrofit installations while delivering significant energy savings compared to traditional lighting solutions.
