

General Purpose AC Induction Motor

This general-purpose electric motor is an AC induction motor used in industrial and domestic applications. It has a cast metal frame for durability and efficient heat dissipation and is suitable for driving compressors, pumps, and fans.

Overview

Versatile Industrial Performance

This general-purpose AC induction motor is engineered for reliable performance in both industrial and domestic environments. Built with a robust cast metal frame, it ensures excellent durability and efficient heat dissipation during operation. Its compact design and versatile mounting options make it an ideal choice for driving equipment such as compressors, pumps, and fans.

Technical Specifications

Typical Applications

- Compressors
- Pumps
- Fans
- Industrial machinery

Power Supply	Single-phase
Housing Material	Cast metal
Connection Type	Terminal box for electrical connection

Features

Key Features	Robust construction, Efficient heat dissipation, Compact design, Versatile mounting
