

General Purpose Electric Motor

This is a general-purpose electric motor designed for industrial use. The motor features a durable aluminum housing with cooling fins and a protruding shaft.

Product Overview

Reliable Industrial Performance

This general-purpose electric motor is engineered for consistent rotational force in a variety of industrial and mechanical applications. It features a robust aluminum housing designed with integrated cooling fins to ensure efficient heat dissipation during operation. The unit is built for durability and reliability, making it a dependable choice for diverse power transmission needs.

Physical Characteristics

Housing Material	Aluminum
Design Features	Cooling Fins, Cylindrical Shape, Black End Caps
Shaft Configuration	Protruding shaft for power transmission
