

Geological Rock Pick Hammer

This geological rock pick hammer is designed for professional geologists, prospectors, and hobbyists. It features a forged steel head for strength and durability, with a square face for breaking rocks and a pointed tip for chipping and prying.

Product Overview

Professional Geological Rock Pick Hammer

This geological rock pick hammer is engineered for durability and precision, serving the needs of professional geologists, prospectors, and hobbyists alike. It features a robust forged steel head that provides exceptional strength for breaking rocks and chipping. The ergonomic design ensures a comfortable and secure grip, minimizing user fatigue during prolonged fieldwork for sample collection and exploration.

Technical Specifications

Head Material	Forged steel
Key Features	Square face, Pointed tip, Forged construction, Ergonomic handle

Usage

Primary Applications

- Collecting geological samples
- Exposing fossils
- Geological exploration
- Breaking rocks
- Chipping and prying

User Experience

Design Advantages

High durability • Reduced fatigue • Secure grip
