

Glass Edge Grinding Machine

This machine is used for both domestic and imported glass linear edge grinding and bevel edge glass abnormality edge grinding. It is mainly used in king kong wheel coarse grinding after fine grinding.

Product Overview

Precision Glass Processing

This specialized glass edge grinding machine is engineered for both linear and bevel edge processing, suitable for domestic and imported machinery. It is designed to handle demanding industrial applications, offering efficient material removal through coarse and fine grinding stages. Built for versatility, it supports various glass types including optical glass, crystal handicrafts, and furniture stone.

Technical Specifications

Available Grits

- 120 #
- 600 #

Standard Dimensions

150 mm
Diameter

16 mm
Ribbed Width

8 mm
Thickness

Compatibility & Application

Supported Machine Types

- Linear edge grinding machines
- Bevel edge glass abnormality machines

Compatible Materials

Optical Glass, Crystal Handicrafts, Furniture Stone

Product Range

Available Product Series

King Kong Wheel • Resin Wheel • 10 S • BK • BD Polishing Wheel • 905 Series Polishing Wheel • Diamond Bit • Polyurethane PaoGuangPian
