

Glazed Tile Roll Forming Machine

The Glazed Tile Roll Forming Machine produces roofing tiles with a glazed finish. It shapes metal sheets into consistent tile profiles using a series of rollers.

ADDITIONAL IMAGES

Overview

The machine is designed for efficient and precise production of various roofing tile profiles.

Professional Glazed Tile Production

This glazed tile roll forming machine is engineered for the high-precision shaping of metal sheets into consistent, high-quality roofing tiles. Featuring a robust steel frame and hardened alloy rollers, it is built to withstand continuous, high-volume production environments. The system integrates automated feeding, hydraulic cutting, and PLC control to ensure precise dimensions, minimal material waste, and ease of operation for professional manufacturing facilities.

Technical Specifications

Robust construction with a blue and yellow finish, ensuring durability and stability during operation.

Forming rollers are crafted from hardened alloy steel, guaranteeing an extended lifespan and consistent tile profiles.

The hydraulic system provides precise control over the forming process, minimizing material waste.

Equipment Components

- Man-made uncoiler
- Roll forming machine
- Computer control system
- Hydraulic control system
- Cutting mechanism

Certifications

ISO 9001 • CE Compliant

Suitable Materials

Color steel plate

Warranty Period

1 Year
