

Gold-Coated Threaded Metal Component for Mining Machinery

This gold-coated metal component features a threaded section and rounded cap. It is suitable for use in construction and mining machinery.

Product Overview

High-Performance Mining Component

This gold-coated threaded metal component is engineered specifically for heavy-duty mining and construction machinery. Its distinct gold coating provides enhanced surface properties suitable for demanding industrial environments. Designed with precision threading, it ensures reliable integration into complex mechanical assemblies where durability is paramount.

Technical Specifications

Component Type	Threaded Metal Component
Surface Finish	Gold-Coated
Primary Application	Mining Machinery, Construction Equipment

Design Features

Design Geometry

- Cylindrical body
- Threaded end section
- Smooth, rounded cap
