

Grain and Bean Peeling Machine

The grain peeling machine is suitable for processing wheat, rice, and beans like green, mung, black, and soy. It efficiently removes husks and peels, preparing the grains for further processing or consumption.

Overview

Efficient Grain and Bean Processing

This grain and bean peeling machine is designed for the efficient removal of husks and peels from various agricultural products, including wheat, rice, and a variety of beans such as mung, black, and soybeans. Built with a robust frame for stability, it features an adjustable peeling chamber and a dedicated loading hopper to ensure consistent throughput. This equipment is an ideal solution for small to medium-scale agricultural processing operations seeking reliable performance.

Processing Capabilities

Compatible Grains & Beans

Wheat, Rice, Green Bean, Mung Bean, Black Bean, Soybean

Technical Specifications

Model Specifications

Specification	FDLG-200	FDLG-330
Power (kW)	2.2-3	5.5-7.5
Capacity (kg/h)	150-200	300-400
Dimensions (mm)	600*400*1000	900*600*1200
Weight (kg)	95	200
