

Grain Cleaning and Destoning Machine

This machine efficiently removes stones and debris from harvested grains. It uses screening and gravity separation techniques to ensure a clean, high-quality output.

Overview

High-Efficiency Grain Processing

This Grain Cleaning and Destoning Machine is engineered for professional agricultural processing facilities requiring superior impurity removal. Utilizing a sophisticated combination of screening and gravity separation, the unit effectively eliminates stones, debris, and dust from harvested grains. Its robust construction and adjustable settings allow for versatile operation across various grain types and contamination levels, ensuring a high-quality, clean output.

Technical Specifications

Key Features

- Robust construction
- Multiple vibrating screens
- Integrated dust aspiration system
- Adjustable settings for various grains

Model Number	11BSQ70B
Processing Methods	Screening, Gravity Separation, Aspiration

Performance

Performance Highlights

1 Destoning

Primary Function

1 Cleaning

Secondary Function
