

Grain Cleaning and Grading Machine

This agricultural machine processes grains, ensuring quality and consistency. It features a hopper for input, a cylindrical container, and a motor for operation.

Product Overview

Efficient Grain Processing

This professional-grade grain cleaning and grading machine is engineered for precision agricultural processing. Designed with a robust metal frame, it features a high-capacity input hopper and an integrated motor system to ensure consistent throughput. The unit includes adjustable controls for material flow, making it an ideal solution for small-scale operations requiring reliable separation and grading of various grain types.

Technical Specifications

Key Components

- Input hopper
- Cylindrical processing container
- Integrated motor
- Material flow adjustment knobs

Best For

Small-scale processing • Grain cleaning • Grain grading

Construction

Metal frame
