

Grain Cleaning and Grading Machine

This agricultural grain processing machinery is designed for efficient cleaning, sorting, and grading of grains. It incorporates a series of elevators, separators, and conveyors to remove impurities, separate grains by size, and ensure a uniform product.

Product Overview

Advanced Grain Processing System

This high-capacity grain cleaning and grading machine is engineered for the efficient processing of agricultural commodities. It utilizes a sophisticated multi-stage system, including elevators, separators, and conveyors, to effectively remove impurities and sort grains by size. Designed for consistency and minimal product loss, this system is an ideal solution for medium to large-scale agricultural operations looking to ensure a uniform final product.

Technical Features

Processing Stages

- Primary cleaning stage
- Screening unit
- Gravity separation
- Pneumatic conveying for dust removal

Construction

Robust construction with adjustable settings

Operational Capabilities

Suitable For

Medium-scale operations • Large-scale operations

Core Functions

Cleaning, Sorting, Grading, Dust Removal
