

# Grain Cleaning and Grading Machine

This grain cleaning and grading machine efficiently removes impurities from harvested grains. It accurately sorts grains by size and density for improved quality.

## Overview

### High-Efficiency Grain Processing

This advanced Grain Cleaning and Grading Machine is designed to optimize post-harvest processing for agricultural facilities. It effectively removes impurities, dust, and debris while precisely sorting grain by size and quality. Engineered for reliability and high throughput, this equipment ensures consistent output quality, helping processors maximize the value of their grain inventory.

## Technical Specifications

### Processing Capacity

**10 t/h**

Throughput

|                     |        |
|---------------------|--------|
| Cleaning Efficiency | 99.5 % |
| Power Requirement   | 7.5 kW |
| Screen Layers       | 3      |

## Features & Capabilities

### Operational Features

- Adjustable airflow control
- Vibration damping system
- Dust extraction port
- Easy-access screen replacement

|                   |                                     |
|-------------------|-------------------------------------|
| Compatible Grains | Wheat, Corn, Rice, Soybeans, Barley |
|-------------------|-------------------------------------|

## Compliance & Standards

### Certifications

ISO 9001 • CE Certified
