

Grain Moisture Analyzer with Digital Display

This precision moisture analyzer is designed for agricultural grains. It features a digital display for moisture content, manual and automatic testing modes, and grain selection capabilities.

Overview

Precision Grain Moisture Analysis

This grain moisture analyzer is a precision instrument designed for accurate measurement and control during grain drying processes. It features a clear digital display and supports both manual and automatic testing modes to ensure optimal drying results. Users can easily select grain types and adjust moisture settings, making it a versatile tool for agricultural quality management.

Technical Features

Control Functions

- Grain Selection
- Moisture Setting Adjustments
- Fine-tuning Controls
- Two-Stage Drying Control

Testing Modes

Manual Test, Automatic Test
