

Grain Processing System for Rice and Similar Grains

This agricultural machinery is a grain processing system designed for rice and similar grains. It automates multiple stages of processing, including cleaning, husking, polishing, and grading.

Overview

Professional Grain Processing Solution

This industrial-grade grain processing system is engineered for the efficient handling and refinement of rice and similar cereal grains. The integrated machinery encompasses multiple critical stages of production, including automated cleaning, husking, polishing, and grading. Built with a robust green metal frame, this system is designed to streamline agricultural workflows and ensure high-quality output for commercial operations.

System Configuration

Processing Stages

- Cleaning
- Husking
- Polishing
- Grading

Frame Material	Reinforced Metal
Core Components	Elevators, Separators, Control Panels

Operational Features

Automation Level

Automated Processing

Primary Application	Rice and similar grain processing
