

Grain Threshing Machine

This agricultural thresher efficiently separates grain from chaff and debris. Its compact design and powerful engine make it suitable for various agricultural settings.

Overview

Efficient Grain Threshing Solution

This agricultural thresher is engineered for high-efficiency grain separation, making it an essential tool for modern farming operations. Featuring a robust metal construction, the machine utilizes a powerful engine and a specialized hopper system to streamline the threshing process. An integrated screening system effectively separates grains from chaff and debris, ensuring a clean and high-quality output for your harvest.

Technical Specifications

Model Number	5T-38
Feeding Type	Semi-feeding

Key Features

Core Capabilities

- Robust metal construction
- Engine-powered threshing mechanism
- Integrated grain-chaff screening system
- Compact and portable design

Best For	Grain Separation, Agricultural Harvesting, Field Processing
