

Grain Water Polisher for Agriculture

This water polisher is an advanced agriculture machine designed for polishing grains, particularly rice. It utilizes a rotating mechanism within its polishing chamber to gently remove bran and dust particles, ensuring efficient and reliable operation.

Product Overview

Advanced Grain Polishing Solution

The Grain Water Polisher is an advanced agricultural machinery designed to enhance the quality of rice by effectively removing bran and dust particles. Featuring a robust electric motor and a precision-engineered polishing chamber, this equipment ensures consistent and reliable performance for high-volume agricultural processing. The integrated control system allows operators to monitor and adjust the polishing process, resulting in premium grain finishing for commercial standards.

Technical Specifications

Polishing Method	Rotary friction polishing
Drive System	Electric motor base drive
Build Quality	Heavy-duty construction, Industrial grade

Operational Features

Control Features

- Integrated control panel
- Process monitoring gauges
- Adjustable polishing switches

Feeding Mechanism	Top-mounted feeding hopper
-------------------	----------------------------
