

Grain Whitening Machine for Industrial Use

This high-efficiency whitener is designed for industrial use in grain processing. It is engineered to deliver consistent and uniform whitening results, minimizing grain breakage and maximizing yield.

Overview

Industrial Grain Whitening Solution

This high-efficiency whitening machine is engineered for continuous industrial grain processing operations. Designed to integrate seamlessly into existing production lines, it features a robust construction that ensures consistent, uniform whitening results. The system is optimized to minimize grain breakage while maximizing overall yield, making it an ideal solution for processing rice, wheat, and various other grains.

Technical Specifications

Operational Mode

Continuous Operation

Suitable Grains

Rice, Wheat

Design & Construction

Key Components

- Feeding hopper
- Whitening chamber
- Output chute
- Electric motor

Design Features

Compact design for easy integration into existing production lines
