

Gravity-Fed Two-Tier Water Filtration System

This two-tiered water filtration system uses gravity to purify water. Water passes through a filter element from the upper chamber to the lower chamber, which has a spigot for dispensing.

Product Overview

Gravity-Fed Water Filtration Solution

This two-tier gravity-fed water filtration system is engineered for efficient household use. Designed with a dual-chamber configuration, it facilitates the natural movement of water from an upper reservoir through a high-performance filter into the lower storage chamber. The system includes an integrated dispensing spigot for easy access to purified water, providing a reliable and eco-friendly filtration solution.

Technical Specifications

Filtration Method	Gravity-fed
Number of Tiers	2
Material	Transparent blue plastic

Compliance and Standards

Certifications	ISO 9001:2000
----------------	---------------

Product Features

Key Features

- Gravity-fed operation requiring no electricity
- Dual-chamber design for separation of unfiltered and filtered water
- Easy-access dispensing spigot
- Clear visual level monitoring
