

Grease Gun Air Bleeder

This air bleeder valve is designed for grease guns. It features a 1/8" NPT connection for easy installation and compatibility with standard grease guns, allowing efficient removal of trapped air.

Product Overview

Efficient Air Removal for Grease Guns

This air bleeder valve is an essential component for grease and lubrication applications, designed to improve the performance of your equipment. By allowing for the efficient removal of trapped air, it ensures consistent grease flow and prevents air pockets from hindering lubrication tasks. Its simple design and standard connection make it a reliable addition to any professional maintenance toolkit.

Technical Specifications

Key Features

- Standard 1/8" NPT connection for compatibility
- Designed for efficient air bleeding
- Optimizes grease flow and equipment performance

Connection Size	1/8" NPT
Primary Application	Grease Application, Lubrication Systems
Model Identifier	GGC-039
