

Grease Water Separator for Kitchen Waste-water

This grease trap is designed for grease-water separation in kitchen wastewater, suitable for both land and marine applications. Its compact structure ensures ease of maintenance and reliable operation, making it essential for kitchen wastewater treatment.

Product Overview

Professional Kitchen Wastewater Treatment

This grease water separator is engineered for the efficient separation of fats, oils, and grease (FOG) from kitchen wastewater. Designed for both land and marine applications, it features a compact and lightweight structure that ensures reliable operation in demanding environments. Its robust construction makes it an essential piece of equipment for commercial kitchens and food processing facilities to prevent drain blockages and ensure environmental compliance.

Key Features

Design Advantages

- Compact structure
- Small volume footprint
- Lightweight design
- Reliable operation
- Easy maintenance

Application Environments

Commercial Kitchen, Food Processing, Land Use, Marine Use

Technical Specifications

Function	Grease-water separation
Maintenance Access	Yes
