

Green PVC Coated Steel Pipe

Durable steel pipes are coated with green PVC for corrosion resistance and longevity. They are ideal for industrial applications requiring robust fluid or gas transport.

Product Overview

Durable Green PVC Coated Steel Pipe

These steel pipes are engineered with a specialized green PVC coating, providing enhanced corrosion resistance and significantly increased longevity. Designed for robust and reliable fluid or gas transport, they are suitable for a wide range of industrial applications. The protective coating offers superior defense against chemical exposure, abrasion, and UV radiation, ensuring consistent performance in both indoor and outdoor environments.

Key Features

Corrosion Resistance

Chemical Resistant • UV Resistant • Abrasion Resistant

Suitable Environments

Indoor, Outdoor, Industrial

Specifications

Material	Steel with PVC Coating
Coating Color	Green
