

Ground Mounted Solar Panel Array 120kW

This ground-mounted solar panel array has a system size of 120kW. The photovoltaic panels are arranged in rows and connected to an inverter system for converting DC power to AC power.

System Overview

Professional Ground-Mounted Solar Solution

This 120kW ground-mounted solar panel array offers a robust and efficient solution for large-scale energy generation. Designed for stability and optimal sun exposure, the system is engineered to withstand diverse environmental conditions while maintaining high performance. Completed in 2010, this installation demonstrates long-term reliability and adherence to rigorous safety and energy conversion standards.

System Capacity

120 kW

Total Capacity

Installation Details

Installation Location	Connecticut, USA
Completion Date	June 2010

Technical Specifications

Mounting Configuration

Ground-Mounted • Row Configuration

Key Components

- Photovoltaic panels
- Robust mounting structure
- Inverter system (DC to AC)
