

Ground Mounted Solar Panel Array

This is a ground-mounted solar panel array. The system has a capacity of 1.1 MW and was completed in May 2011.

Project Overview

Solar Installation Overview

This ground-mounted solar array represents a significant renewable energy installation located in Colorado, USA. Completed in May 2011, the system delivers a robust 1.1 MW capacity, demonstrating long-term reliability and performance in arid climate conditions. The array is designed for large-scale energy generation, utilizing efficient ground-mounting infrastructure.

System Capacity

1.1 MW

Total System Size

Technical Details

Mounting Configuration

Ground Mounted

Completion Date

May 2011

Installation Site

Colorado, USA
