

GY6-125 Motorcycle Rear Brake Light Switch

This rear brake light switch is designed for GY6-125 motorcycles. It activates the brake light when the rear brake is engaged, ensuring safe operation.

Product Overview

Reliable Brake Light Activation

This rear brake light switch is engineered specifically for GY6-125 motorcycles, ensuring precise and consistent brake light activation whenever the rear brake is applied. Designed to meet or exceed OEM standards, it serves as a critical safety component for your vehicle's braking system. Its durable construction and reliable connector facilitate a straightforward installation process for maintenance or replacement needs.

Technical Specifications

Key Features

- OEM specification compliance
- Durable cable construction
- Reliable electrical connector
- Enhanced road safety visibility

Compatibility	GY6-125
Component Type	Rear Brake Light Switch
