Product Overview

Half-Closing Bucket Drill with Teeth

The Half-Closing Bucket Drill with Teeth is a specialized tool engineered for demanding construction machinery applications, particularly in rock drilling and piling projects. Its semi-closed bucket design is optimized for efficient material removal, while the robust teeth configuration ensures precise drilling operations. This tool is designed to provide reliable performance and enhanced productivity when creating stable foundations in challenging soil conditions.

Technical Specifications

Structural Features

- Semi-closed bucket design
- Bucket teeth cutting tools
- Bao'a teeth cutting tools

Customization Options

- Adjustable height
- Adjustable thickness
- Adjustable floor thickness
- Adjustable number of teeth

Applicable Formations

Pure clay, Old clay, Silt, Viscous stratums
