

Hand-Operated Concrete Scarifier

This walk-behind scarifier is designed for preparing concrete surfaces. It is suitable for removing coatings and other materials.

Overview

Professional Concrete Scarifier

This hand-operated scarifier is a versatile ground processing machine designed for heavy-duty surface preparation. It is ideal for removing concrete, epoxy resin, and old coatings, as well as clearing road markings like zebra crossings. Engineered for precision and durability, it features an adjustable milling depth and an integrated dust collection interface to maintain a clean working environment.

Technical Specifications

Blade Type	Hexagon
Blade Material	Tungsten alloys
Total Blades	76
Compatible Engines	Baili-tong, Honda
Dust Collection Interface	Yes
Adjustable Milling Depth	Yes

Applications

Primary Applications

- Concrete surface preparation
- Epoxy resin removal
- Wear-resisting ground hair removal
- Road zebra crossing removal
- Floor renovation
- Old coating removal

Model Variants

Available Model Series

OKX-200 • OKX-250 • OKX-300
