

Hand Operated Fluid Transfer Pump

This hand operating pump is a manually powered device designed for transferring fluids. It features a robust construction with a cylindrical body and a lever mechanism.

Overview

Reliable Manual Fluid Transfer

The IQ100-212HO is a robust, hand-operated fluid transfer pump designed for environments where electrical power is unavailable or impractical. Engineered for efficiency, this device features a reliable manual lever mechanism that ensures consistent fluid movement. It is an ideal solution for industrial or remote settings requiring a dependable, self-sufficient pumping system.

Performance Metrics

Displacement

146 m³/h

Displacement

Lift 21.6 m

Suction 9.5 m
