

Hand Operated Pressure Test Pump

This hand operated test pump is designed for pressure testing various systems. It features a robust construction with a lever-action handle for efficient pressure generation and includes a pressure gauge for accurate monitoring.

Product Overview

Professional Pressure Testing Solution

This hand-operated pressure test pump is designed for precise leak detection in heating, oil, air-conditioning, and sprinkler installations. Featuring a robust construction with an efficient lever-action handle, it allows for reliable pressure generation and accurate monitoring. The unit includes replaceable seals and lubricatable plungers to ensure long-term durability and continuous operation in demanding environments.

Technical Features

Maintenance & Design

- Lubricatable pump plunger
- Replaceable seals
- Efficient running needle valves
- Integrated pressure gauge

Included Components

High pressure hose • Connectors • Fluid reservoir

Suitable Applications

Heating Installations, Oil Installations, Air-Conditioning Systems, Sprinkler Systems, Plumbing
