

Handheld Wood Router with Adjustable Base

This handheld power tool is designed for shaping and cutting wood. It features an adjustable base for controlling cutting depth, handles for secure grip and control, and a motor housing with ventilation for cooling.

Overview

Precision Woodworking Performance

This handheld wood router is engineered for versatility and control, making it an essential tool for professional woodworking tasks. Featuring an adjustable base, it allows for precise control over cutting depth, ensuring consistent results for edge profiling, grooving, and decorative design work. The ergonomic design includes secure handles for enhanced grip and stability, while the integrated motor housing ventilation system promotes efficient cooling during extended operation.

Technical Specifications

Tool Type	Handheld Wood Router
Primary Applications	Edge Profiling, Grooving, Decorative Design, Woodworking
