

Harbor Crane with Rotating Boom

This heavy-duty crane system is designed for harbor operations and features a vertical mast with a rotating boom. It is suitable for lifting and moving heavy loads in marine environments.

Overview

Robust Harbor Crane Solution

This heavy-duty crane system is engineered specifically for demanding harbor and marine environments. Featuring a vertical mast design with a high-performance rotating boom, it provides exceptional reach and versatility for loading and unloading operations. The robust construction and integrated large winch mechanism ensure reliable performance when handling heavy cargo in challenging maritime conditions.

Technical Specifications

Key Features

- Rotating boom mechanism
- Heavy-duty mast construction
- High-capacity winch system
- Corrosion-resistant marine design

Operational Status

Heavy-Duty • Industrial Grade

Crane Type

Rotating Boom Crane

Suitable Environments

Harbor, Marine, Port Operations
